Ligero | Lexxo

lightweight + diverse + versatile

The Seating systems LEXXO and LIGERO are especially designed for regional transportation. They set new standards in terms of comfort, design and modularity.

The Seating systems have a high level of versatility. The modular design concept allows the adaption to almost any installation requirement.

Due to the ergonomic styling and the very thin backrest the seat features a maximum leg room for passengers, nevertheless the seat provides a high level of comfort.

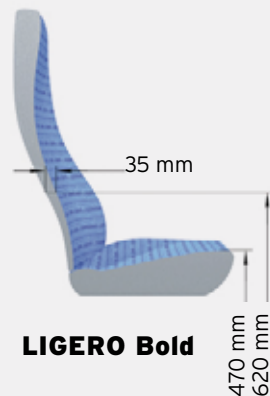

The modular design concept allows replacement of all major parts and a quick-release of seat and back cushions.
