Class-leading comfort

Streamline

Best-in-class comfort

With its full-magnesium frame construction, the STREAMLINE sets new standards in stability, functionality and weight efficiency. The innovative joining technology of the seat frame is designed for crash testing in accordance with UNIFE requirements, addressing the demanding technical requirements of modern rail transportation.

The ergonomically designed seat geometry, combined with triple-density foam, ensures a high level of passenger comfort even on longer journeys. Depending on the configuration, the STREAMLINE can be equipped with a wide range of comfort features, including seat adjustment, an adjustable footrest, and a choice of either a compact or full-size folding table. Its modular design concept enables individual components to be replaced quickly and cost-effectively, while allowing flexible adaptation to different vehicle concepts and customer-specific requirements.

The STREAMLINE is available in various comfort configurations for 1st and 2nd class.
